

## Solving Equations: Using the Multiplicative Inverse

$$\frac{1}{3}x = -7$$

$$-6 = -\frac{1}{5}x$$

$$\frac{x}{4} = -31$$

$$-9 = \frac{x}{-7}$$

$$\frac{2}{3}x = -8$$

$$-3 = \frac{3}{5}x$$

$$\frac{7}{8}x = \frac{1}{7}$$

$$\frac{2}{9}x = \frac{1}{8}$$

$$\frac{4}{7} = \frac{3x}{5}$$

$$\frac{7x}{9} = 2\frac{3}{5}$$
